Making Decision and Conclusion

In this lesson, we will discuss the process of making decision and forming a conclusion based on the hypothesis testing.

Decision Making

01 Compare the calculated p-value with the significance level

02 If p-value > 0.05, accept null hypothesis and reject alternative hypothesis

03 If p-value < 0.05, accept alternative hypothesis and reject null hypothesis

Conclusion

- Demonstrate the result from the hypothesis testing
- If null hypothesis accepted, explain what it was
- If alternative hypothesis accepted, explain what it was

Thank you for your time 😊
