

Function

1. CHARACTER SET
2. COLLATE
3. ENCRYPTION
4. READ ONLY

ALTER DATABASE *dbname* *alter_option* *option_value*....;

**Name of the
Database**

OPTIONS	DESCRIPTIONS
CHARACTER SET	This option allows you to change the default character set of the database. Example – ascii, utf8, etc.
COLLATE	This option allows you to change the collation of the database. Example – utf8_general_ci
ENCRYPTION	This option allows you enable (Y) or disable (N) the default database encryption.
READ ONLY	Using this option you can allow modifications on the database along with the objects within (0) or make it read only (1).

N.B.: In SQL, collation refers to the set of rules that determine how data is sorted and compared in a database. It specifies the character set encoding for a particular column or table in a database, as well as the rules for comparing and sorting characters in that column or table.
